

F&A Inventory

how it works

For the CT Sports Medicine team

Get into the app

- 1 On your iPhone, open **sportsmedtoolbox.com** in Safari. Site password: **SYKsports2026**. Add it to your home screen: Share icon, then **Add to Home Screen**.
- 2 Scroll to the bottom of the home screen, tap **About & tips**, then the gold **CT Team** link.
- 3 Enter the CT team password: **CTCowboys5.18** — the same one you use for cycle counts. It unlocks F&A Inventory on the phone at the same time.
- 4 Pick **your phone** from the list and tap Continue. Everything you record in F&A is stamped with this name.
- 5 On the CT Team screen tap **F&A Inventory**. Cycle Count sits right above it.

What it is

One live picture of every unit of CT Sports Med product handed to the Foot & Ankle team. Drops go in, case usage and send-backs come out, and the team Google Sheet rebuilds itself from that ledger. Nothing is edited on the sheet by hand — every change is an event recorded in the app.

The F&A reps see the same stock read-only and can record send-backs. Everything else — drops, usage, corrections, transfers, admin — is under your control.

CT team password, then pick your phone — once per phone.

The CT Team screen, then F&A Inventory home.

The home screen

The pills are the live totals: **on hand**, **expired**, **send back** (expires within two months — tap it to open Remove / Return with those lots on top), and **≤3 mo**.

- 1 **On hand** — what is out right now, first to expire on top.
- 2 **Transactions** — bill-only imports. A gold **pending** badge means something needs your review.
- 3 **Add inventory** — record a drop to the F&A team.
- 4 **Remove / Return** — send-backs, territory transfers, write-offs, product back to CT SM.
- 5 **Record case usage** — manual bill-only entry when the emailed one is not coming.
- 6 **History** — every event, with corrections filed from here.
- 7 **Admin** — teams, sheet access, and email settings (master password).

Synced under the tiles is when the phone last read the sheet; screens re-read on their own as you move around. **Open in Google Sheets** opens the live sheet in the browser — look, don't edit.

On hand

- 1 Grouped by status: **Expired**, **Send back ≤2 mo**, **Expiring ≤3 mo**, **OK**. Each card shows REF, description, lot, expiration, who has it, and the quantity.
- 2 Search by REF, lot, or description — a fragment is enough. Usage and send-backs come off the moment they are saved.

Home pills — tap expired or send back to jump straight to Remove / Return.

All seven tiles. The Transactions badge shows how many bill onlys are waiting.

Add inventory

A drop is recorded in two steps: who, then what.

- 1 Name the drop (e.g. *Hartford office drop*) and set the date.
- 2 **From** — tap your name. **Territory Transfer** asks which territory it came from; **Other** asks for a note. Both are required.
- 3 **Received by** — the F&A rep, **Bloomfield Warehouse**, or **Account** (then the account name and where at the account).
- 4 Tap **Save drop — add items**. The camera opens. Aim at each package barcode: REF, lot, and expiration fill in, a confirmation sheet asks for the quantity, and **Confirm** adds the line. Scan the same box again to bump it.
- 5 + **Manual** when a label will not read: type the REF (the description fills in from the catalog), LOT, expiration, and QTY, then **Add to list**. Lot and expiration are required on every line — an already-expired date needs a second tap to confirm.
- 6 In **Items in this drop**, tap the pencil to edit a line, $-/+$ to adjust, $\times$ to remove. Tap **Save drop**. The home pill confirms: *Inventory add saved*.

*Leave mid-drop and the app keeps the tray — you pick up where you left off, or tap **Start over**.*

Step 1: drop name, date, From, Received by. Step 2: the scanner.

+ Manual entry with expiration and quantity, and the tray ready to save.

● Inventory add saved — 2 items · 3 units

Every save is confirmed on Home.

Remove / Return

Takes product out of F&A stock. Pick the removal type first — the fields follow it.

- 1 **Returned to Stryker** — tracking # optional (add it later from the Home reminder), notes optional.
- 2 **External Transfer** — to another territory. Receiving rep/territory and who sent it are required; tracking # optional.
- 3 **Written Off** — reason required.
- 4 **Returned to CT SM** — back into your own stock. Who received it is required.
- 5 **Scan a barcode** or tap a lot in the on-hand list, set the quantity, **Add**. The app will not let you take more than is on hand. Then **Submit**.

A send-back saved without a tracking # leaves a gold **Tracking # needed** card on Home until anyone on the team enters it.

Ship it to

Write the label exactly like this for CT Sports Med product:

Sports Med Returns [IT1223]
6300 S. Sprinkle Rd
Portage, MI 49002

CT Sports Med product only. Product from other territories can never be sent back with CT Sports Med product.

Removal types, then an External Transfer with its required fields and one lot selected.

The four removal types — the fields below change with the type.

Record case usage

Most usage arrives on its own through the emailed bill only (next page). Use this screen when it will not — the entry is the same manual bill only, filed by hand.

- 1 **C-number, Facility, Surgeon, and Date of surgery** are required. PO # is optional.
- 2 Tap the lots used, set the quantity, **Add**. Tapping cannot take more than is on hand.
- 3 + **Manual — not on the list** is for product that was used but never recorded as dropped. Enter REF, lot, expiration, and quantity.
- 4 If the quantity is more than the sheet shows, **Not enough on hand** appears. Tick *This inventory was already transferred, say where it came from, and Record & continue*: the app files a late-entry drop first, then the usage, so the ledger stays honest.
- 5 Tap **Save usage**. The C-number clears for the next case; facility and surgeon stay.

Case header with two lots selected, and the overdraft check that files a late entry.

Not enough on hand — the box turns the shortfall into a recorded drop.

Transactions

Bill onlys reach the sheet by email. The app reads them, matches the lines to F&A stock, and applies the usage.

- 1 Email the bill-only PDF to **syksmtoolbox+fa@gmail.com**. The hub checks the inbox on its own every few minutes; **Check for new Bill Onlys** forces a check now.
- 2 A clean bill only — every line matched to a lot on hand — is **auto-applied** and shows under Recent. An auto-reply goes back with the per-line result.
- 3 Anything else waits under **Pending**: a line with no lot, a REF the catalog does not know, or more used than is on hand. Tap **Review**.
- 4 On the review screen, type the missing lot, tick **Not F&A stock — skip** for lines that are not ours, or tap **Resolve overdraft** to file the late entry. Then **Approve** or **Deny all**.

Approved and denied imports show up in History as *Bill only approved / denied*, with the total and the reviewer.

A pending bill only with one issue, and the review screen where the lot is filled in.

History

- 1 Every event newest first, grouped by day: **Received**, **Used in case**, **Returned to Stryker**, transfers, write-offs, and bill onlys. The badge is the unit change.
- 2 Filter with the chips (type, who entered it) or search by REF, lot, description, C-number or tracking #. Tap a card for its lines.
- 3 Nothing is ever edited or deleted. A mistake is fixed with a new event that reverses the old one, so the sheet stays auditable.

A Received card expanded, and File Correction on one of its lines.

Fixing a mistake

- 1 **File Correction** on a line: choose **Correct details** to change REF, lot, expiration, or quantity, or **Void entirely** to remove the line. An explanation is required.
- 2 **Edit drop details** on a Received card re-files the whole drop — drop name, who received it, who it came from — with every line voided and re-entered. Use it when the wrong person or place was picked for a scan session.
- 3 Stock updates the moment a correction saves. The original lines stay in History, dimmed, with the correction linked to them.

Filter chips and search, and Edit drop details for a whole drop.

Admin

- 1 Enter the **master password**.
- 2 **Sports team** and **F&A team** lists. Add a name and email and the sheet is shared to them as a **viewer** and a welcome email goes out — app link, their password, the on-hand list, and (for F&A) the F&A guide. × removes them and revokes sheet access.
- 3 **Emails** — weekly F&A expiring report (Sunday 8 PM) and monthly sports summary (1st, 8 AM). Changes save instantly.
- 4 **Send full report** mails the current on-hand PDF; **Send welcome email** re-sends to anyone, including someone not on a team. Stryker's mail filter can quarantine these — confirm they arrived.

Admin: teams and email settings, and the welcome-email picker.

Quick answers

Dropped product but the F&A rep can't see it?

It was not recorded. Add inventory → record the drop; it appears on their phone at the next sync.

Bill only stuck in Pending?

Open Transactions → Review. Fill the lot or skip lines that are not F&A stock, then Approve.

Entered something wrong?

History → File Correction on the line, or Edit drop details on the drop. Never edit the sheet.

Send-back missing its tracking #?

Home shows a Tracking # needed card until anyone on the team adds it.

App looks out of date?

Home → Check for updates.

Any other questions?
