

Cycle Count Scanner

how it works

SportsMed Toolbox

Get into the app

- 1 On your iPhone, open **sportsmedtoolbox.com** in Safari. Site password: **SYKsports2026**.
- 2 Add it to your home screen: tap the Share icon, then **Add to Home Screen**. It opens full screen and keeps working with no signal.
- 3 From the home screen, tap the gold **Inventory Management** card at the bottom.

Tap the gold **Inventory Management** card, then pick your territory.

Join your team (once per phone)

- 1 Pick your territory from the list — the search box narrows it fast.
- 2 Enter your team password. Get it from whoever runs your territory.
- 3 Pick **your** phone from the list, then tap Continue. Every scan from your phone lands on your own tab of the team sheet — pick the right one.
- 4 That is the whole setup. The phone remembers both choices.

Enter the team password, then pick your phone. One unlock per phone — the list comes from your team's roster.

Start a new territory

- 1 Tap the gold **New Territory** button instead.
- 2 Your name and Gmail (no Stryker emails), a territory name, and a team password. Add teammates now or any time later.
- 3 Tap Done — the app builds your team's Google Sheet, shares it to every Gmail, and drops you straight into your new territory. Everything on the following pages — counts, syncing, the team sheet and the Field Ops count sheet — works the same for a brand-new territory.

New Territory signup. Everyone gets edit access, and each phone gets its own tab.

The ? button on the territory list opens this guide.

Run a count

Before you start: tap **Check for updates** on the home screen so every phone is counting on the same version.

- 1 Tap **Cycle Count**. Locations you have already counted show as cards — open one to keep adding to it, or tap **Start new count** for a fresh location.
- 2 Type the **Location** (Trunk, Storage Unit, a surgery center). **Sub-location** and **Notes** are optional — use sub-location for bins and shelves. Then tap **Start Scanning**.
- 3 **Open in Google Sheets** on the Cycle Count screen takes you straight to your team's sheet.

RFT Best Practice

Use Sub-location to indicate specific shelf or location within a storage unit to aide in error checks. Start a new count for each sub-location so that no batch gets too large in case of a system crash or unanticipated error.

Start a count. Locations you have used before autofill as you type.

Scanning

- 1 Point the frame at the package barcode. Each scan adds a line, and scanning the same item again bumps its quantity.
- 2 When a Field Ops count sheet is loaded (page 5), the confirmation after each scan says whether that item and lot are **on the Field Ops list** or **not on the list** — so surprises get noticed at the shelf, not at the end.
- 3 **Camera off** saves battery while you move between shelves. **End** closes the count — you can reopen the location any time to keep going.

Scan screen: frame up top, the location's lines below, quantities on the right.

Fixing a line

- 1 + **Manual** adds an item by typing the REF when a barcode will not read — lot and a quantity stepper included.
- 2 Tap a line's quantity to correct it — a stepper opens, and **Delete line** removes it entirely. The sheet updates on the next sync.

Syncing

- 1 Every scan saves on the phone the moment it happens. Nothing is lost if you lose signal or close the app mid-count.
- 2 **Saved** ✓ means the team Google spreadsheet has everything from this phone. **Syncing...** or a queued pill means no signal — the scans send themselves as soon as signal returns. No button to press.
- 3 Do not change your device pick while scans are queued; the app will stop you until they finish sending.

The sync pill sits above the count lines: **Saved** ✓, **Syncing...**, or the number still queued.

Manual add: REF, lot, and a quantity stepper.

Tap a quantity to fix it — or delete the line.

The team sheet

Each territory has its own Google Sheet, shared automatically to every teammate's Gmail the moment they are added. **Your phone's tab** holds the raw lines you scanned — timestamp, location, REF, description, lot, expiration, quantity. **_Master**, the first tab, stacks every phone's lines into one live view of the whole territory and rebuilds itself as the team changes. **Field Ops** appears once someone uploads a Field Ops count sheet (page 5). There is no Devices tab on new territories — phones and people are managed in the app (below).

A1	Timestamp										
	A	B	C	D	E	F	G	H	I	J	K
1	Timestamp	Device	Location	Ref	Description	Family	Lot	Exp	Expired	Qty	Notes

The **Field Ops** tab: **Confirmed inventory** (green) with counted quantities, **Additional** (blue) for scans that were not on the list, **Missing** (red) for lines nobody scanned. The status cell at the far right shows when it was last rebuilt and who uploaded the list.

Manage your team (in the app)

Open your territory and tap **Manage this team**, then enter the team password. From there you can rename the territory, change the password, **add a teammate** (their tab is created and the sheet is shared to their Gmail on the spot), **fix** a name, or **remove** someone — their tab and scans stay on the sheet, but their access to it is revoked. If they should not get back into the app either, change the team password too.

Field Ops count sheet

Field Ops sends each territory a count sheet — the materials and lots they expect you to have. Load it once and every scan the team makes is checked against it as you go; when the count is done, the reconciliation is already built.

Load the sheet (any phone, once per count)

- 1 Save the **empty** sheet Field Ops emailed you to your phone (Files app; .xlsx or .csv).
- 2 Open your territory → Cycle Count. Tap the **FIELD OPS** row at the top, then **Upload count sheet** and pick the file.
- 3 Check the preview and tap **Use this sheet**. It is loaded for the whole team — every phone sees it on its next sync.

While you count

- 1 The row shows **found** · **missing** · **additional** for the whole team, refreshed about every minute while the screen is open; your own scans move the numbers instantly.
- 2 Tap the row for the full picture — **Missing** (on the list, not scanned yet), **Found** (with quantities), **Additional** (scanned but not on the list) — with search by material, batch or description.
- 3 Matching ignores dashes and leading zeros (0234100001 = 234-100-001), but the lot has to match.

When the count is done

- 1 The team sheet has a **Field Ops** tab — Confirmed, Additional and Missing side by side, in Field Ops' own layout. It rebuilds itself within a minute of any scan; do not edit it by hand.
- 2 **Download Field Ops Sheet** on the Field Ops screen builds that same reconciliation as an Excel file on your phone and opens the share sheet — Save to Files, Mail, AirDrop, Outlook.
- 3 **Replace sheet** swaps in a new file; **Remove** takes the tab off the team sheet. Neither touches your scans.

Cycle Count with a count sheet loaded: the Field Ops row on top, your counts below.

The Field Ops screen: progress, Download Field Ops Sheet, then Missing / Found / Additional with search.

Quick answers

Wrong quantity on a line?

Open the location, tap the quantity, fix it. The sheet updates.

New phone or new rep?

Manage this team → Add a teammate. Their tab and sheet access appear on their Gmail immediately. (Original six territories: add the phone on the sheet's Devices tab instead.)

Forgot the team password?

Whoever created the territory has it — every password change is mailed to the ToolBox account, so Nate can always dig it out.

A feature not working?

Try updating or refreshing: Home → **Check for updates**, then reopen your territory. Most oddities are a phone still on an older version.

No Field Ops row on the Cycle Count screen?

Check for updates, then reopen the territory — the row appears after the first sync with the team sheet.

Done with your cycle count?

Open your territory → Cycle Count → tap the **Field Ops** row → **Download Field Ops Sheet**. The share sheet opens: choose **Mail** or **Outlook** and send it to Field Ops, or **Save to Files** to send later. The file is the same three-section reconciliation as the Field Ops tab on your team sheet.
