

F&A Inventory

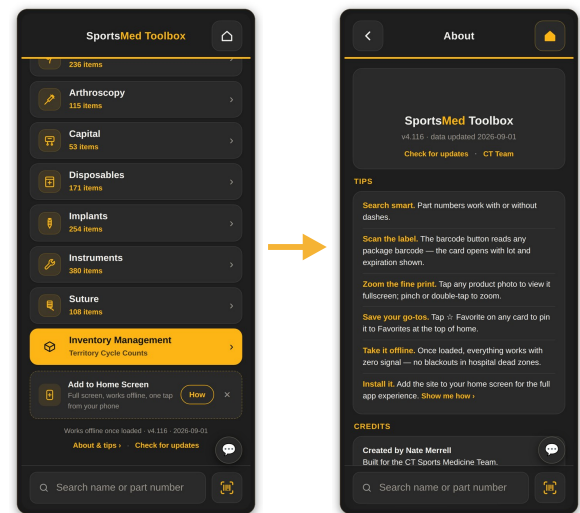

how it works

For the Foot & Ankle team

Get into the app

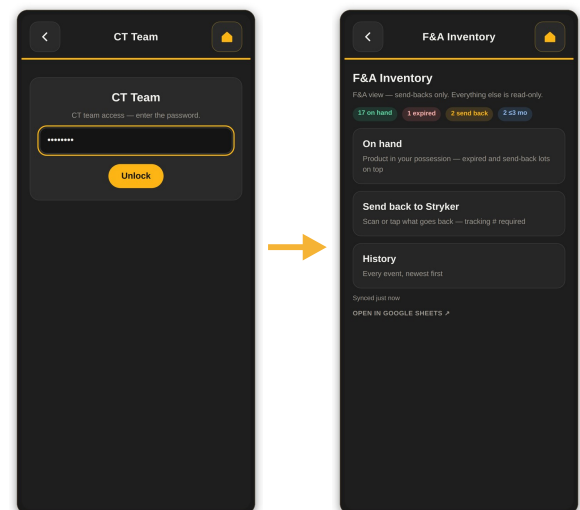

- 1 On your iPhone, open **sportsmedtoolbox.com** in Safari. Site password: **SYKsports2026**.
- 2 Add it to your home screen: tap the Share icon, then **Add to Home Screen**. It opens full screen and keeps working with no signal.
- 3 Scroll to the bottom of the home screen and tap **About & tips**.

Open F&A Inventory

- 1 On the About screen, tap the gold **CT Team** link under the version number.
- 2 Enter the CT Password: **CTFA2026**
- 3 You land on **F&A Inventory**. This is the F&A view: everything is read-only except send-backs to Stryker — drops and case usage are recorded by the CT Sports Medicine team and show up here on their own.
- 4 Next time: home screen → About & tips → CT Team → CT Password. Three taps and you are back in.

Bottom of the home screen: About & tips, then the gold CT Team link.

Enter the CT Password, then you are on the F&A Inventory home screen.

The home screen

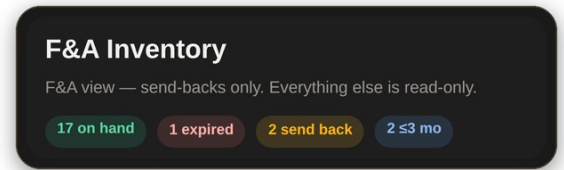

The pills under the title are the live count of everything handed to the F&A team — the same numbers the CT Sports Medicine reps see.

- 1 **on hand** — total units in your possession.
- 2 **expired** and **send back** — lots that are past date or expire within two months. Tap either pill and it opens Send back with those lots on top.
- 3 **≤3 mo** — lots expiring within three months. Plan cases around these first.

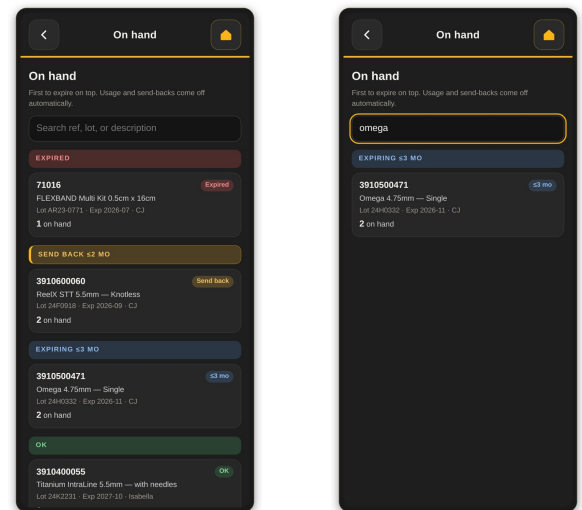

Synced under the tiles shows when this phone last read the team sheet. It refreshes on its own as you move between screens.

On hand

- 1 Tap **On hand**. Product is grouped by status, first to expire on top: **Expired**, **Send back ≤2 mo**, **Expiring ≤3 mo**, then **OK**.
- 2 Each card shows the REF, description, lot, expiration, who received it, and the quantity on hand.
- 3 Use the search box to filter by REF, lot, or description — a fragment is enough.
- 4 Usage and send-backs come off automatically. If a number looks wrong, tell the rep who dropped the product — corrections are made on their side, never by editing the sheet.

Home pills: on hand, expired, send back, and expiring within three months.

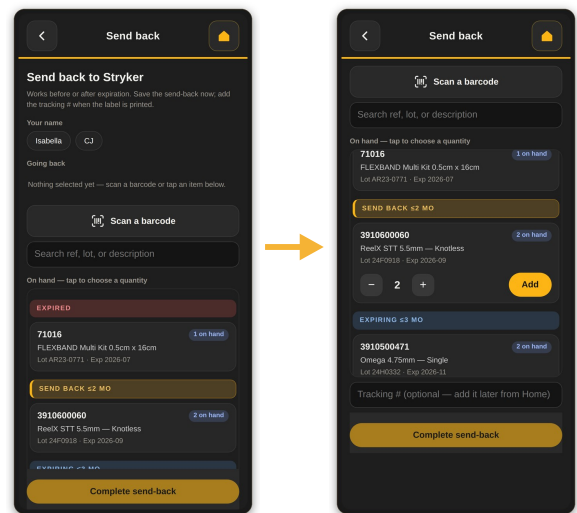

On hand grouped by status, and the same list filtered by typing “omega”.

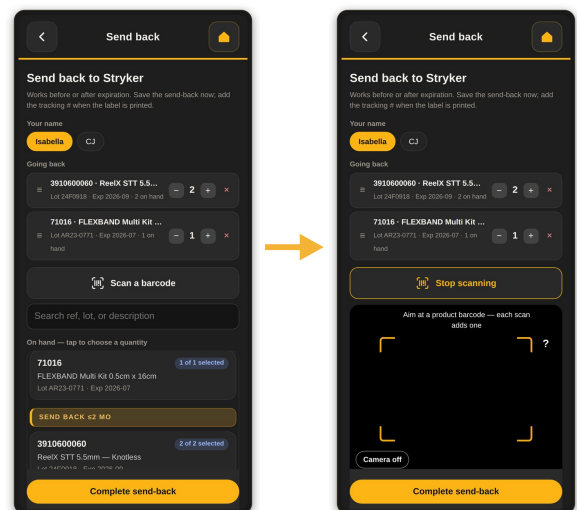

Send back to Stryker

Works before or after expiration. Save the send-back the moment the box is packed; the tracking # can follow once the label is printed.

- 1 Tap **Send back to Stryker**, then tap **your name** at the top. The button stays off until a name is picked.
- 2 **Scan a barcode** opens the camera — aim at the package barcode and each scan adds one unit to **Going back**. If a lot is not in F&A stock the app says so and adds nothing.
- 3 No camera? Tap an item in the **On hand** list. A stepper opens — set the quantity, then tap **Add**. The app will not let you add more than is on hand.
- 4 In **Going back**, use – and + to adjust a line or × to remove it. The badge on each card shows how many of that lot are already selected.
- 5 Type the **Tracking #** if you have it, then tap **Complete send-back**. The stock comes off the sheet immediately.

Pick your name, then tap a lot to open its quantity stepper.

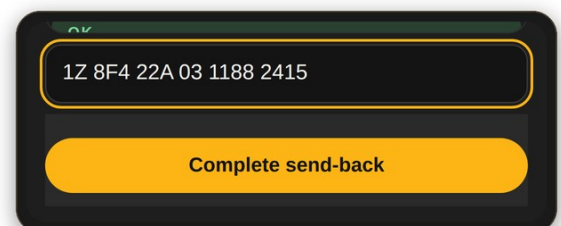

Going back lists what is selected; Scan a barcode adds straight from the package label.

Ship it to

Write the label exactly like this for CT Sports Med product:

Sports Med Returns [IT1223]
6300 S. Sprinkle Rd
Portage, MI 49002

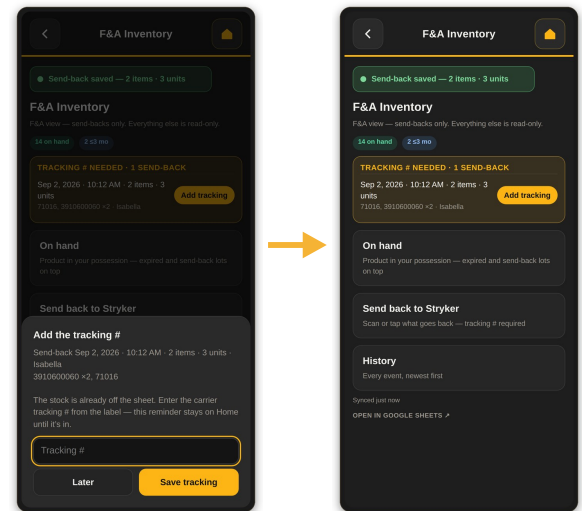

CT Sports Med product only. Product from other territories can never be sent back with CT Sports Med product.

Tracking # goes in the last field — or later from Home.

The tracking

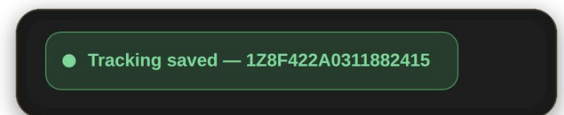

- 1 When a send-back is saved without a tracking #, the app asks for it right away. Tap **Later** if the label is not printed yet.
- 2 A gold **Tracking # needed** card stays on Home — date, items, units, and the REFs — until the number is in. Anyone on the team can enter it.
- 3 Tap **Add tracking**, type the carrier number from the label, and tap **Save tracking**. It lands on the send-back rows in the team sheet.

The tracking sheet appears as soon as the send-back saves. *Later* keeps the reminder on Home.

Saving and signal

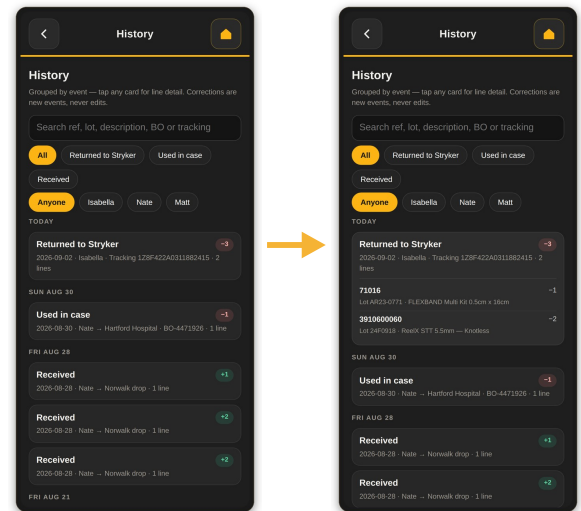

- 1 A green pill at the top of Home confirms every save: **Send-back saved** with the item and unit count, or **Tracking saved** with the number.
- 2 A save needs signal. If it cannot reach the server, the button turns back on with a message — nothing is sent twice, so it is safe to tap again once you have bars.
- 3 If the app is closed mid-save, Home checks the sheet the next time it opens and tells you whether that save landed. If it did not, it offers **Retry**.
- 4 Do not enter the same send-back again from memory — check **History** first.

Tracking saved — the number is now on the send-back rows in the sheet.

History

- 1 Every event, newest first, grouped by day: drops to the team (**Received**), **Used in case**, and **Returned to Stryker**. The green or red badge is the unit change.
- 2 Tap a card to expand its lines — REF, lot, description, and quantity per line. A send-back card also shows its tracking #.
- 3 Filter with the chips (type, who entered it) or search by REF, lot, description, BO or tracking #.
- 4 History is append-only — corrections are new events by the CT Sports Medicine team, never edits.

History with the filter chips, and a send-back card expanded to show its lines.

Quick answers

Sent back the wrong lot?

Tell your Sports Med rep — they record the correction.
Do not enter a second send-back.

Scan says the lot isn't on hand?

The inventory may have come from another territory and not yet been transferred. Alert your Sports Med rep, who will add the inventory to F&A once its origin has been determined.

What happens to inventory used in a case?

Inventory used in a case is written up in a bill only and sent to sportsmedtoolbox by the Sports Med Team. Once the bill only is received, it is removed from F&A on hand inventory and the bill only is visible in the History tab.

App looks out of date?

Home → Check for updates.
